

**Amendments to the Claims:**

Please replace the claim listing with the following:

Claims 1 to 25 (canceled).

Claim 26 (currently amended): A device with displaceable gas turbines or gas turbine modules, comprising:

a gas turbine;

a gas turbine conveying device;

a holding device for supporting the a gas turbine or gas turbine module, the holding device cooperating with the conveying device such that the holding device, and the gas turbine or gas turbine module supported thereon, are movable by moving the conveying device, wherein the conveying device is integrated into a floor of a workshop, wherein the holding device is releaseably coupled to the conveying device, and wherein when the holding device is coupled to the conveying device, the holding device is drawn over the floor of the workshop as the conveying device is moved, wherein the holding device rolls on the floor as the conveying device is moved.

Claim 27 (canceled).

Claim 28 (previously presented): The device as recited in Claim 26, wherein the conveying device moves the gas turbine or gas turbine module to be moved in a cycle through consecutive work stations.

Claim 29 (previously presented): The device as recited in Claim 26, wherein the conveying device includes a chain conveyor.

Claim 30 (previously presented): The device as recited in Claim 26, further comprising a lifting device, the lifting device configured to raise and lower the gas turbine or gas turbine

module to be moved, when the conveying device is immobilized.

Claim 31 (previously presented): The device as recited in Claim 30, wherein the lifting device is configured to raise and lower the holding device as well as the gas turbine or gas turbine module to be moved, when the conveying device is immobilized

Claim 32 (previously presented): The device as recited in Claim 30, wherein a respective lifting device is situated in the area of each work station.

Claim 33 (previously presented): The device as recited in Claim 30, wherein the conveying device is raised and lowered hydraulically.

Claim 34 (previously presented): A method for displacing gas turbines or gas turbine modules, comprising the steps of:

raising a conveying device into a raised state such that a gas turbine or gas turbine module to be moved is raised, and

moving the conveying device such that the gas turbine or gas turbine module is moved.

Claim 35 (previously presented): A method for displacing gas turbines or gas turbine modules, comprising

supporting a gas turbine or gas turbine module to be moved on a holding device;

moving the holding device and the gas turbine or gas turbine module by moving a conveying device which is cooperatively engaged with the holding device.

Claim 36 (previously presented): A device for displacing gas turbines or gas turbine modules, comprising:

a gas turbine conveying device integrated into a floor of a workshop and having a first section with a main conveying direction and a second section running in an opposite direction of the main conveying direction;

the first section having a raised state above a plane of the floor and a lowered state,

the gas turbine or gas turbine module being movable by the first section in the raised state, the lowered state permitting placement of the gas turbine or gas turbine module on the floor.

Claim 37 (new): The method as recited in claim 34 wherein the raising includes raising the gas turbine or module off the floor and the moving step includes moving the gas turbine or module through a plurality of workstations.

Claim 38 (new): The device as recited in claim 36 further comprising a second gas turbine conveying device traveling parallel to the gas turbine conveying device, the gas turbine or turbine module being movable when the gas turbine conveying device and second gas turbine conveying device are movable and in the raised state.

Claim 39 (new): The device as recited in claim 36 wherein the gas turbine conveying device is raisable and lowerable via a pneumatic device.

Claim 40 (new): The device as recited in claim 36 wherein the gas turbine conveying device is a chain conveyor.

Claim 41 (new): The device as recited in claim 40 wherein the chain conveyor cycles the gas turbine or module through a plurality of workstations.
